The Condition of College & Career Readiness 2016

New Jersey Key Findings

Performance

- A record number of students—33,646—took the ACT in New Jersey's 2016 graduating class. Since 2012, the number of New Jersey students taking the ACT has increased by 51.7%.
- In New Jersey, the percent of students meeting the ACT College Readiness Benchmarks stayed the same in reading and decreased in three subject areas:
  - A 2% decrease in science, from 52% to 50%
  - A 3% decrease in English, from 78% to 75%
  - A 2% decrease in mathematics, from 63% to 61%
- 42% of students met all four ACT College Readiness Benchmarks (same as 2015).

- Relative to ACT Composite score and subject level scores, New Jersey saw the following:
  - As the size of the state's graduating class taking the ACT has grown, especially among African American and Hispanic students, the average ACT Composite score has decreased from 23.2 to 23.1. Average scores tend to decrease with a larger testing base.
  - The proportion of Hispanic and African American students in the testing pool has increased: Hispanic students from 9% in 2012 to 14% in 2016, and African American students from 8% in 2012 to 10% in 2016.

STEM

- New Jersey graduates who took advanced science and math courses show higher levels of achievement:
  - Students who took physics earned significantly higher average science scores and were more likely to meet or surpass the ACT College Readiness Benchmark in science than those who did not.
  - Students who took a fourth year of math in high school, regardless of course, significantly outperformed those students who did not, in mathematics scores and in Benchmark attainment.
- STEM Benchmark Achievement
  - 35% of the 2016 New Jersey graduating class met the ACT STEM Benchmark—15% higher than the national average. The average score was 2.3 points above the national average.

Career Readiness

- This year, for the first time, ACT has provided an indicator of career readiness based on ACT composite scores. Table 3.4 in the state ACT Profile Report details how ACT-tested New Jersey graduates are progressing toward the ACT National Career Readiness Certificate™ (ACT NCRC®).
- Progress toward career readiness is based on research linking ACT Composite scores to ACT NCRC levels. The ACT Composite cut score for each ACT NCRC level corresponds to a 50% chance of obtaining that level. If a student's ACT Composite score surpassed the cut score for an ACT NCRC level, they are categorized as making progress towards the next higher ACT NCRC level. Attainment of ACT NCRC levels indicates workplace employability skills that are critical to job success.
- In New Jersey, 80% of ACT tested graduates are considered making progress towards at least a gold ACT NCRC level. This compares to 68% nationally.
Behaviors that Impact Access and Opportunity

- Testing patterns
  - Of ACT-tested 2016 graduates testing during their 10th-, 11th-, or 12th-grade years, students taking the ACT more than once averaged an increase in Composite score.
  - 59.7% of White students, 67.7% of Hispanic students, and 64.9% of African American students tested only once.
  - Over the last five years, the number of Hispanic and African American graduates in New Jersey taking the ACT has increased significantly:
    - African Americans—1,867 in 2012 to 3,515 in 2016
    - Hispanics—1,915 in 2012 to 4,702 in 2016
  - 91.5% of White students who tested at least twice and who first tested in their junior year increased their score by 1 point and scored 2 points higher than 11th-grade White students who tested only once.
  - 89.8% of Hispanic students who tested at least twice and who first tested in their junior year increased their score by 0.6 point and scored 1.5 points higher than 11th-grade Hispanic students who tested only once.
  - 84.6% of African American students who tested at least twice and who first tested in their junior year increased their score by 0.5 point and scored 0.6 point higher than 11th-grade African American students who tested only once.
- Below are the top five colleges and universities to which New Jersey graduates sent their ACT scores:
  1. Rutgers University
  2. Montclair State University
  3. Rowan University
  4. Kean University
  5. College of New Jersey
- University of Delaware is the out-of-state school that receives the most scores from New Jersey students.
- The ACT Educational Opportunity Service (EOS) opt-in rates
  - EOS is a free service that allows students to learn about educational, scholarship, career, and financial aid opportunities from colleges, universities, financial aid and scholarship agencies, and other organizations that offer educational programs. In the 2016 New Jersey graduating class, 64.8% of students opted into EOS. This is below the national average of 73.1%.
- Get Your Name in the Game* information
  - The “Get Your Name is the Game” campaign provides students an opportunity to find colleges that would be a good fit and helps students who were not thinking about postsecondary education to realize that college is a possibility.
  - Atlantic Cape Community College, Lincoln College of Technology, Princeton University, Saint Peter’s University, Stevens Institute of Technology, and William Paterson University accessed 654,772 student names using this initiative.
- Fee Waiver Usage
  - In New Jersey, there were 5,917 fee waivers issued and 4,007 of those were used. This equates to a 67.7% usage rate. The national rate was 74.5%.
  - ACT provides students fee waivers to provide more access and opportunity for students.

Pipeline

- Only 4% of ACT-tested New Jersey 2016 graduates expressed an interest in pursuing education as a major or career. Those students earned an average ACT Composite score of 20.6, lower than the state average of 23.1. In comparison, 5% expressed an interest in pursuing visual and performing arts.
- Aspirations matter. Students in New Jersey who aspire to a higher level of postsecondary education achieve higher ACT Composite scores:
  - 49.3% of graduates aspiring to a graduate degree or professional degree.
  - 36% of graduates aspiring to a bachelor’s degree earn an average Composite score of 21.4.
- 19% of students who took the ACT in New Jersey listed “Undecided” as their planned educational major—higher than the national average of 13%. This is a great opportunity to expose students to the ACT Interest Inventory at an earlier age with ACT Profile® and PreACT™, allowing students starting at age 13 to see the connection between their personal characteristics and potential majors/careers.
- 13% of students listed Health Science and Technology as an intended major or career. The average score for these students is 22.5, which is below the state average of 23.1. With the largest-growing job in the state being home health aides, these students will have many opportunities.

Special State Talking Points

- In 2016, ACT honored exemplars in 41 states as part of our College & Career Readiness Campaign. In New Jersey, these honorees include:
  - Student—Emily Anodide, Brick Township High School
  - High School—North Star Academy College Preparatory High School
  - Two-Year School—Atlantic Cape Community College
Student Data Trends

- Between 2012 and 2016, the number of students taking the ACT in New Jersey increased by 51.7%.

There is good news in that 84% of New Jersey’s 2016 ACT-tested graduates aspired to postsecondary education. Interestingly enough, 85% of New Jersey’s 2015 ACT-tested graduating class aspired to enroll in postsecondary education, compared to 77% who actually did enroll. If we fully closed the aspirational gap, an additional 2,354 of the 2015 ACT-tested graduates from New Jersey would have enrolled in postsecondary education.
What You Need to Know

At ACT, we are inspired every day to make a positive difference. Here are a few ways we are making an impact each day in the lives of students, teachers, education, policy makers, and workforce leaders.

Enhancements to ACT Score Reports starting in September 2016
• Introduction of ACT Kaplan Online Prep Live in September 2016
• New Score Reports

Pre ACT
• Affordable cost—$12 per student tested for schools, districts, and states
• Flexible administration—Schools, districts, and/or states may administer on any date between September 1, 2016 and June 1, 2017
• Structured test environment—Similar to what the student will experience when taking the ACT test

Online Prep Live
ACT® Kaplan
• A virtual classroom experience that delivers all the benefits of ACT Online Prep, plus an interactive teaching experience
• Live learning experiences available at no cost to students who register for the ACT using a fee waiver
• Recorded sessions available on demand to provide maximum flexibility to students

ACT® Aspire®
• New Performance Level Descriptors coming in August 2016
• More than 5 million ACT Aspire online assessments administered to US students since January 2016, a major milestone for the program and up by more than 130% compared to the previous year
• New Score Reports

ACT® Engage®
• Helps schools face the challenge of preparing students for success after high school. Read the latest white paper, Identifying Skills to Succeed in School, at Work, and in the “Real World.”
• New Score Reports

ACT® WorkKeys®
• Updated versions of the ACT National Career Readiness Certificate (ACT NCRC) assessments and credential coming in summer 2017
• Fully updated ACT WorkKeys curriculum and test prep available in summer 2017 to support the updated ACT NCRC assessments
• Will include a new test delivery platform that will introduce features and functionality important to ACT WorkKeys customers

www.act.org/condition2016
Key ACT Research

The Condition of STEM 2016—Releasing November 2016
This report provides national and state data about the 2016 graduating class in the context of STEM-related fields (Science, Technology, Engineering, Mathematics) to determine student interest levels in specific STEM fields and, more importantly, readiness in math and science of those interested in STEM careers.

College Choice Report 2015
This report follows the ACT-tested high school graduating class of 2015, focusing on specific testing behaviors that may expand college opportunities available to students. This is an important topic for enrollment managers and admissions officers to consider, as students’ participation in these testing behaviors have implications for colleges’ chances to recruit, advise, and place these prospective students.

Recommendations

1. Create an assessment model that measures a variety of skill domains and competencies required for college and career success.
   Historically, college and career readiness assessments have focused only on academic skills. ACT research has clearly established areas of competency important for college and career readiness success. While our research shows that ACT solutions independently measure key components of college AND career readiness, we and others have begun to realize that no single solution can measure the full breadth of this readiness, nor should it. Simply put, the ACT alone is not enough to measure the full breadth of career readiness. A more holistic assessment model, incorporating multiple domains and specific skills associated with career clusters or occupations, will typically be most appropriate for describing and evaluating student readiness for college and career.

2. Optimize opportunities to influence awareness and engagement of underserved learners.
   Initiatives designed to aid underserved learners are only as effective as they are visible. We must inform advocates and ALL underserved learners about the available and effective programs designed for this purpose. For example, in the 2015–2016 academic year, approximately 730,000 students registered to take the ACT using fee waivers valued at more than $36 million. Yet, not all eligible students took advantage of this offer. Similarly, institutions must use data to inform intervention strategies if they are going to help underserved students be prepared for postsecondary success.

3. Take the guesswork out of STEM.
   It is critically important to align STEM initiatives to capitalize on performance, measured interest, and expressed interest. Essential to this effort is expanding and nurturing interest in STEM, which will impact the emerging pipeline of STEM majors, teachers, and workers. This requires capturing a wider range of students and employing concrete measures to inform intervention and programming. To do so, states and districts must look for partnering opportunities from K–12 to postsecondary education to the workplace.

4. Focus on the implementation of fewer, higher, clearer, standards in K–12 classrooms to raise the bar for all students.
   No matter the adopted standards, proper implementation must focus on the most critical component for increasing readiness—effective, high-quality teaching. This requires investment in postsecondary teaching programs, professional development, and state-level collaboration among K–12 and higher education.

5. Don’t over test students.
   When states, schools, and districts build an assessment strategy that recognizes the limits and promise of test scores, they will reduce the likelihood of over testing. Used ethically and appropriately, assessments can inform decisions at individual and institutional levels. Misunderstood, misused, or abused, assessments cause confusion, can be perceived as punitive, or result in ill-conceived strategies. To quote ACT founder E.F. Lindquist, “Assessment is valuable to the extent it bridges teaching and learning.”
